

THE CHALLENGE

Bell Canada, the renowned telecommunications company, required an HVAC solution for their corporate offices as well as sufficient year-round cooling to the company's LAN room.

THE SOLUTION

Mitsubishi Electric's City Multi was chosen to supply the office areas and the LAN room with air conditioning. One set of refrigerant pipes were used to connect all indoor ducted units with the VRF City Multi condensing units situated on the rooftop. The Variable Refrigerant Flow (VRF) ensures year round cooling of the LAN room, even while the office areas are heated during the winter months.
